Winter 2024-2025 (202425)  
Prof. Abrams – cfa22@drexel.edu  
Midterm Exam – February 11, 2025

This is an example header named `example_head-12345678.tex`.

1. (15 pts)

This is an example problem named `example_problem_template-12345678.tex`.

Determine the product of 5 and 8.

2. (16 pts)

This is an example problem named `example_problem2_template-12345678.tex`.

Determine the quotient of 3.9 and 357.0.

3. (17 pts)

Superheated steam at 4 MPa and 357.0°C is to be converted to saturated steam at 3 MPa in a desuperheater. This desuperheater is supplied with inlet liquid water at 48.0°C. The unit should produce saturated steam at a rate of 30.0 kg s<sup>-1</sup>. Assuming adiabatic operation, and assuming the liquid inlet is saturated, what is the mass flowrate of the inlet water?

The following enthalpies will be useful:

Superheated steam at 357.0°C and 4 MPa:  $\hat{H} = 3,111.68$  kJ/kg;

Saturated liquid water at 48.0°C:  $\hat{H}^L = 200.98$  kJ/kg; and

Saturated water vapor at 3 MPa:  $\hat{H}^V = 2,803.69$  kJ/kg.

This is an example tail named `example_tail.tex`.
