Midterm Exam – February 11, 2025

This is an example header named `example_head-38618812.tex`.

1. (15 pts)

This is an example problem named `example_problem_template-38618812.tex`.

Determine the product of 5 and 8.

2. (16 pts)

This is an example problem named `example_problem2_template-38618812.tex`.

Determine the quotient of 3.1 and 359.0.

3. (17 pts)

Superheated steam at 3 MPa and 359.0°C is to be converted to saturated steam at 3 MPa in a desuperheater. This desuperheater is supplied with inlet liquid water at 53.0°C. The unit should produce saturated steam at a rate of 44.0 kg s⁻¹. Assuming adiabatic operation, and assuming the liquid inlet is saturated, what is the mass flowrate of the inlet water?

The following enthalpies will be useful:

Superheated steam at 359.0°C and 3 MPa: $\hat{H} = 3,133.95$ kJ/kg;

Saturated liquid water at 53.0°C: $\hat{H}^L = 221.87$ kJ/kg; and

Saturated water vapor at 3 MPa: $\hat{H}^V = 2,803.84$ kJ/kg.

This is an example tail named `example_tail.tex`.
