Midterm Exam – February 11, 2025

This is an example header named [example_head-95002171.tex](#).

1. (17 pts)

Superheated steam at 4 MPa and 349.0°C is to be converted to saturated steam at 3 MPa in a desuperheater. This desuperheater is supplied with inlet liquid water at 52.0°C. The unit should produce saturated steam at a rate of 13.0 kg s⁻¹. Assuming adiabatic operation, and assuming the liquid inlet is saturated, what is the mass flowrate of the inlet water?

The following enthalpies will be useful:

Superheated steam at 349.0°C and 4 MPa: $\hat{H} = 3,099.15 \text{ kJ/kg}$;

Saturated liquid water at 52.0°C: $\hat{H}^L = 217.69 \text{ kJ/kg}$; and

Saturated water vapor at 3 MPa: $\hat{H}^V = 2,803.60 \text{ kJ/kg}$.

2. (19 pts) True/False questions. Write “T” for “True” or “F” for “False” in the blank space.

The pope is Freewill Southern Baptist.

A bear shits in the woods.

Entropy is delicious.

The sky is blue.

This is an example tail named `example_tail.tex`.
